

Kyle Kearney

Front End Developer

Engineer with 3 years of experience writing maintainable code, automating CI/CD that decreased deployment time by over time 50% and developing test suites that completely eliminated deployment bugs. Seeking to use proven engineering skills to improve code quality, test coverage and deployment speed.

WORK EXPERIENCE

Front End Engineer **October 2020 – June 2023**

Lead Sherpa, Remote

- Organized the development of PropStack, a database management system that allows customers to target outreach marketing campaigns helping to close 24% more transactions.
- Restructure state management system (Redux), cleaning up 2,000+ lines of redundant code and standardized best code practices to support the growing engineering team.
- Re-engineered component library removing bloated dependencies and improving site load time by over 68% and build time by over 200%+.
- Implemented CircleCI automating the deployment process reducing deployment time by 78%.

Front End Support Engineer **July 2019 – September 2020**

Booster Apps, Remote

- Co-ordinated with customers to solve breaking issues within the customer's Shopify stores, helping to increase customer satisfaction by 19%.
- Analyzed customer interactions to create feature stories helping to drive production decisions for v2 apps.
- Designed and developed new front-end architecture for V2 applications, to help integrate more smoothly with customer store themes, browser compatibility and load time by 17%.
- Documented support protocols allowing the support team to help triage more tickets, reducing developer involvement by 16%.
